

DVI EDID Emulator

StarTech ID: DVIEDIDDET

The DVIEDIDDET DVI EDID Emulator captures and retains EDID information from a monitor/display and can then be connected to the video signal source, emulating the information in order to trick the video source (video card) into outputting the same video signal - even if the display is not directly connected to the video source or is connected using a video extension system.

Since most video extender systems don't offer EDID communication between the signal source and a remote display, the DVI EDID Emulator (DVIEDIDDET) is a perfect workaround for ensuring the optimum signal is provided to the display, regardless of whether or not there is a direct connection between the source and the display.

Applications and Solutions

- Detect EDID settings and capture them to trick your computer into thinking the display is still connected.

Features

- Make your computer think it is directly connected to the display even using converters or Cat5 extenders
- Stores EDID settings even when unit has been unplugged

Technical Specifications

- Color: Black
- Connector Types: 2 - DVI-I Dual Link Female
- Enclosure Type: Steel
- Product Height: 1.5 in [38 mm]
- Product Length: 2.64 in [67 mm]
- Maximum Cable Length: 393.7 in [10000 mm]
- Power Adapter Included: Yes
- Power Adapter - Amperage: 1.0
- Power Adapter - DC Voltage: 5V
- Center Tip Polarity: Positive
- Carton Quantity: 20
- Shipping (Package) Weight: 1.86 lb [0.84 kg]
- Product Weight: 4.87 oz [138 g]
- Product Width: 2.2 in [56 mm]
