

8 Port Dual Display and Media Expansion Module for SV831

StarTech ID: SV831MEDIA

The SV831MEDIA is an add-on component that enhances StarTech.com's StarView line of KVMs, and can function as an 8 port dual display KVM. The SV831MEDIA provides dual display support for PCs with a dual-head video card or 2 installed video cards, as well as adds multimedia capabilities to KVMs without these native capabilities. The SV831MEDIA switches 3 different audio ports on a PC to one console (Speaker/Line Out, Microphone, and 1 other audio in or out port). The unit works with 4-speaker surround PC sound systems using the speaker/line out and auxiliary in/out jacks.

Applications and Solutions

- Sound and Digital Video editing studios
- Testing labs

Features

- Connects to the LINK expansion port of the KVM switch and follows the PC selected by the user on the SV831
- If connected to an SV831D, the audio/second monitor can be switched to a different CPU independently of the main KVM switch using the OSD menu
- Provides 8 PC's dual display support for PCs with a dual head video card or 2 installed video cards when used with SV831
- Requires SV831, SV831D, or SV832DS KVM switch to operate
- Switches 3 different audio ports on the PCs to 1 console (Speaker/Line Out, Microphone, and 1 other audio IN or OUT port)
- Works with 4 speaker surround PC sound systems using the speaker/line out and aux. IN/OUT jacks
