

**SERVER REMOTE CONTROL**

# Finally everyone can afford Remote Server Control

Remote server control at an unbelievably low cost

With StarTech.com's SV1107IPEXT, everyone can afford the convenience and often mission critical need for remote server control.

This 1 port KVM over IP device allows you full BIOS level control of your servers or pc's from anywhere in the world with an internet connection, or within a building over a long distance via their LAN.

The price point of this KVM over IP makes it feasible for any situation where it would be desired to have full remote control of a machine, for any sized business no matter how small.

- With a single port KVM over IP, you can grow your IT technology at your own pace, rather than being forced immediately into a large KVM solution, add one port at a time when needed
- Single ports to individual servers offers a redundancy level that larger KVMs do not; if one KVM goes down, you still retain access to all other servers

SKU: SV1107IPEXT

**Comparison Matrix**

Brand / Model	StarTech.com SV1107IPEXT	Lantronix Spider SLS200	Freedom9 KVM-011A	Dlink KVM-410
<b>MSRP</b>	<b>\$436.99</b>	\$513.00	\$549.99	\$699.99
