

## 4-Port USB Multimedia KVM Switch with Audio, USB 2.0 Hub & Ethernet Hub

When setting up additional machines at a workspace, a KVM helps run multiple PC's with a single screen, keyboard & mouse. However for all of them to access the network and internet, more network drops, or an additional hub needs to be added to the desk space. With this unique device, the hub is build right in, saving space, clutter and hassle.

### Benefits:

- Transfer files easily between connected machines at 480mbit/sec
- Share one internet connection across 4 computers
- Independently control the audio and video feeds of two seperate computers at once
- Hot pluggable so a machine can be added without restarting the unit or PC
- Simple one touch switching between servers
- High resolution (2048 x 1536) support
- Strong and durable steel enclosure

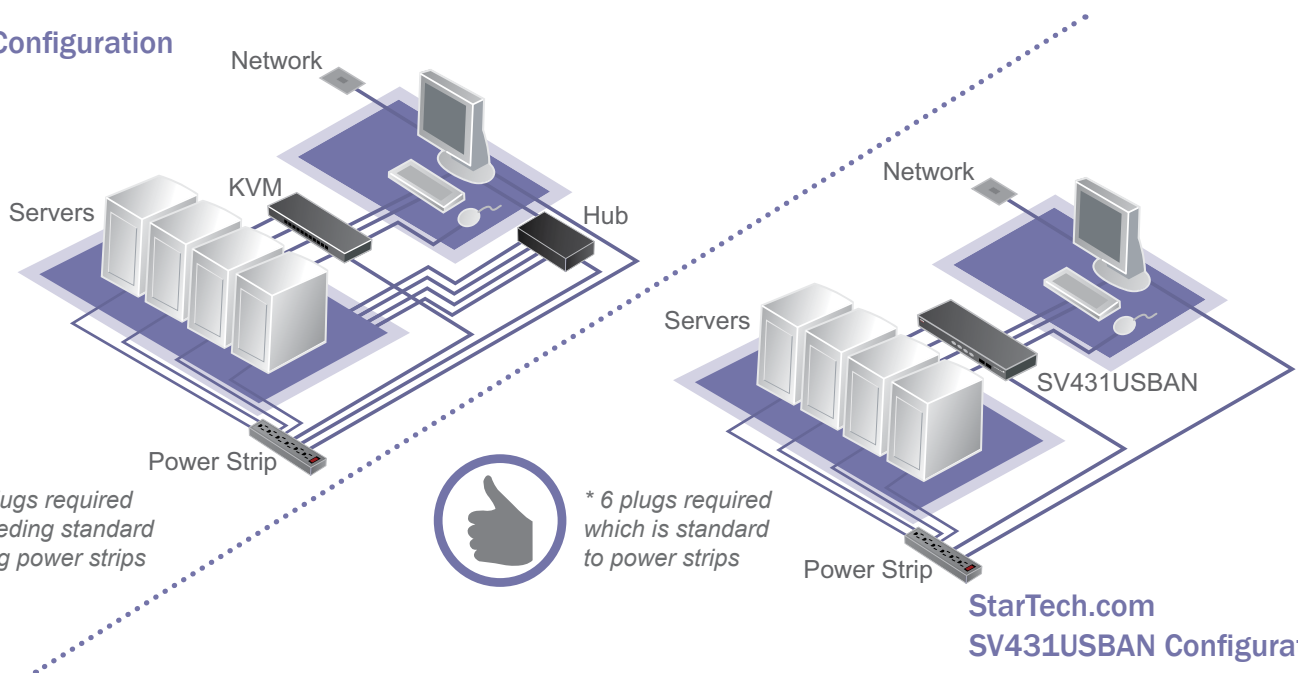

\* 2 Port Version is also available (SV231USBAN)
