

## ISA Post Diagnostic Test Card

*StarTech ID: ISAPOST*

The StarTech.com ISA Post Diagnostics Card makes troubleshooting PC problems easy. Simply plug the card into a ISA slot on a malfunctioning PC, and the card reports any problems in the form of error codes on it's LED display. These codes are then cross-referenced to the enclosed error code chart to pinpoint the cause of the problem. PC technicians and system builders can save hours of troubleshooting time and prevent non-defective parts from being replaced.

Note: You may have to refer to your motherboard manufacturer's manual for motherboard specific error diagnostic codes

### Applications

- An extremely valuable tool for PC service technicians
- Great for identifying faulty parts during system assembly

### Features

- Easy to use - Simply plug it into a free ISA slot and turn on the computer to display the error code
- Supports AMI, Award, and Phoenix BIOS POST error codes
- Includes a post code look-up table to provide a description of the problem
